FOR IMMEDIATE RELEASE

Alhaporl Debuts in the *Inc. 500* List of Fastest Growing Private Companies

September 8, 2008 – Alhaporl® a Cleveland, Ohio-based provider of advanced engineering services and applied technology has been recognized by *Inc.* magazine as one of America's fastest growing private companies. Alhaporl ranked #24 among government services companies and #238 among all companies.

Alhaporl provides technology-development services to aerospace-oriented organizations, including the Department of Defense, NASA, and commercial space companies. Alhaporl has received several prime contracts and subcontracts with major aerospace related companies. Contracts include the design and development of igniter technology for rocket engines to help burn greener fuels, low-power systems for Unmanned Aerial Vehicles (UAVs), and tactical RF communications systems for military applications.

Alhaporl retains the services of many retired scientists and engineers with extensive spaceflight design experience so they can provide rapid response resources to technical tasks and mission assurance testing.

The *Inc. 500* is ranked according to percentage revenue growth from 2004 through 2007. Qualifying companies must be US-based, privately held, for profit, and independent – not subsidiaries or divisions of other companies. Alhaporl had revenues of \$647,796 in 2004 and \$7.7 million in 2007, a growth of more than 1000% during those four years.

Anthony J. Miranda, president of Alphaport says, “We are honored to be included in the *Inc. 500* list of fastest growing companies. It has been our focus on aerospace technology and our depth of knowledge and experience that has made us successful. The years ahead hold even more promise for exciting new technologies that will take space exploration to the next level. Alphaport is excited to be part of those programs and missions.”

About Alphaport

Alphaport provides a full spectrum of engineering, high-value space exploration technology, and product development services for technical organizations. Alphaport has a rapidly growing team of experienced research scientists, engineers and project managers, many of whom are retired from government facilities across the country.

Alphaport provides technical expertise for space system services, including design, analysis and development of power and propulsion systems, launch vehicles, space communications and more. Other areas of expertise include emerging technology development, six sigma process improvement, professional development training, safety, risk assessment, quality assurance, and turnkey knowledge retention programs.
